

ALPHA[®]THRIVE

32 oz Instructions

1. First remove the clear tab from the bottle (note – once tab is removed, product can spill out the side of the bottle if tipped).

2. In the picture on the left, both the red lever and white lever are in the “off” position. Turn the red lever “down” so that it now faces side-to-side versus up and down. The red lever is now in the “on” position as shown in the picture on the right.

3. Push the white lever forward so that it is in the position as the picture on the right above.

The picture on the right shows the position both the red and white levers should be in for the “on” position.

4. You may now connect the garden hose to the hose end of the bottle. Make sure you have pushed the red and white levers into the “on” position before turning the water on.

- An estimated 4 minutes of spray time will dispense the contents.
- If you want to use another spray bottle, set the application to 4 TBL per gallon of water.
- Apply once the ground temperature has reached 45 degrees.
- If it is dry, we recommend a light watering after application.
- It is ok to use our products before or after a rain.
- For best results, apply in the evening or during the coolest part of the day.
- Use 3 times per year (Spring, Summer and Fall).
